

# **About 25% of people infected with HIV do not know it.**

Young adults and teens under the age of 25 continue to be at risk. Most young people are infected through sex.

The only way to know if you have HIV for sure is to get tested. To find out where you can get tested in your area go to [www.iknowmine.org](http://www.iknowmine.org) or [www.hivtest.org](http://www.hivtest.org).

**You can eliminate or reduce your risk of becoming infected with HIV during sex by choosing to:**

- ◆ Abstain from sex or delay first sex
- ◆ Be faithful to one partner or have fewer partners
- ◆ Use condoms correctly and consistently
